

Hi Everyone:

Hope this E-Mail finds you all well. I am happy to report Tom Murphy has completed the well at Wilson Hill Park using the 2-inch casing. He punched the casing into a sand aquifer at 135 feet that produces 15 gallons per minute. This is more volume than we will ever need with a deep well pump

The well was completed last week, and test results from the Michigan Department of Public Health show the water to be of very good drinking quality. Tom is going to wait until spring to install the pump. There is no real benefit in doing it now.

I have attached the test results for your review. Please do not hesitate to contact me if you have any questions. I would ask that you please confirm receipt of this message. A simple "Got it" will suffice.

Respectfully,
Bruce Pelletier
